SKILL east 2019

Future Skills | Entrepreneurship | Networking

22 June 2019 | Bhubaneswar

Conference | Keynote Session | Exhibition | Networking Lunch

About Skill East

The target of skilling 500 million youths within 2022 is not only a matter of national urgency, it is astounding in its scale. This has coupled with multiple challenges in implementation. The country today requires a robust strategic framework which neatly ties the existing initiatives and brings the stakeholders together.

The dip in the youth population of key global economies vis-à-vis the growing numbers in India presents a huge opportunity, which can be capitalized if our talent pool is trained as per international standards. While the Indian skills ecosystem is still evolving, a lot of experience and unique studies are available internationally. Such learnings can enable India to adopt and adapt, thereby helping us create an internationally benchmarked talent pool. The Skill East Summit will propel this discussion to newer heights this year.

The theme of this year's summit is
Future Skills | Entrepreneurship | Networking

Thematic Programme

Sessions I : **Future Skills: Readiness for Industry 4.0**

Digital technologies are rapidly transforming the manufacturing sector and we are already into Industry 4.0. Today, every company is a potential digital enterprise. This is a critical phase in industrial evolution marked by computers, mobile devices, internet connectivity, data, robotics, 3D technologies, augmented reality, cloud computing and a host of other developments that are shaping the new age workplace skills in the manufacturing sector.

This session will shed light on:

- How do skills impact productivity and efficiency in the evolving industrial production systems?
- With 'digital' being the keyword what are the most needed skills for employment and employability?
- How will Industry 4.0 affect MSMEs that drive 38% of our GDP and employ more than 110 million?

Sessions II ; **Fostering Entrepreneurship: The next big game-changer**

Self-employment is being increasingly recognized as one of the prominent ways of income in developing countries. This session will engage eminent stakeholders in the skilling sector to discuss the importance of cross-sector collaborations and focus on building skills for self-employment and entrepreneurship as potential solutions to the skilling gap in India.

This session will focus on how:

- Technology can embrace entrepreneurship and invites sustainable growth
- Identify the existing opportunity within Skill Ecosystem
- Success stories & best practices

Sessions III : **Networking for Skills – Go Global**

Self-employment is being increasingly recognized as one of the prominent ways of income in developing countries. This session will engage eminent stakeholders in the skilling sector to discuss the importance of cross-sector collaborations and focus on building skills for self-employment and entrepreneurship as potential solutions to the skilling gap in India.

This session will focus on how:

- Technology can embrace entrepreneurship and invites sustainable growth
- Identify the existing opportunity within Skill Ecosystem
- Success stories & best practices

Key Deliberations

- Understanding and adapting the international models to prepare for Industry 4.0
- Forging global partnership to focus on improved quality of work and engage workforce in gainful employment
- Engaging in policy dialogue with all stakeholders
- Identifying the opportunity for entrepreneurship to create sustainable growth
